

Not all reagents are the same

High purity Chromasolv™ solvents from Honeywell

Honeywell Chromasolv™ is the original product with the same exact product number that you used in the past. The only way to be certain you are purchasing genuine Chromasolv products is to buy Honeywell.

When you're sourcing solvents, it's important to be sure that you know the product you are buying. Sometimes it can be hard to tell the difference between leading brands like Chromasolv and alternative competitor products: often the packaging is very similar, and they may have similar or the same product numbers.

We have over **166 different Chromasolv solvents and blends**, specially designed for use in a wide range of chromatography applications.

Only original Chromasolv products will give you the guarantee of quality and the trusted results you expect.

Chromasolv products:

- Are manufactured and quality-controlled in the same location, using the same methods, at the same laboratory in Seelze, Germany
- Are made to the original specifications that guarantee high quality
- Are made up of a 5-digit number and the pack size separated by a hyphen
 - e.g. 34851-2.5L

For further information about Chromasolv, contact your Honeywell account manager.
